## At a Glance

Cybanetix SIEM as a Service provides organisations with an overview of events taking place in their network, to quickly identify threats and malicious user behaviours. The automated SIEM includes pre-built dashboards, alerting, and event search and investigation facilities. The service removes the need to invest in manually trawling through millions of event logs to find actionable intelligence.

Cybanetix SIEM as a Service offers a cost-efficient, hassle-free SIEM that improves your organisation's security posture and aids PCI, ISO27001 and GDPR compliance.

Log all your data

Cybanetix SIEM as a Service provides you with a dedicated cloud facility in which you log all your events. All events are parsed, processed and correlated against threats. Crucial events are monitored through graphical dashboards and alerts raised via email or SMS.

As part of the service, Cybanetix will assist with on-boarding and configuring all your logging sources to ensure that the SaaS service feeds the data into the dashboards and alerts.

Use your data

Cybanetix SIEM as a Service allows you make use of data that exists within your organisation, but typically resides on numerous individual devices in discrete formats. It centralises logs and converts them into security intelligence, which allows an IT team to proactively respond to security events and comply with regulations.

Cloud intelligence

Cybanetix Threat Cloud (CTC) is a central repository of indicators of compromise, compiled from several global threat streams. This updates SIEM as a Service with the latest threat intelligence, and customer event logs are correlated against this to identify threats, including connections to ransomware and malware servers.
Key Features

- Cloud
  Customers benefits from a true SaaS service, with minimal investment up-front and no infrastructure needed on-premise.

- Correlate events with known threats
  Cybanetix Threat Cloud enriches events with live threat data allowing real-time threat detection and alerting.

- Intuitive overview of threats and event
  SIEMaaS provides IT users with a simple intuitive interface, which graphically depicts trends and events. This allows customers to improve their security posture and achieve compliance with PCI, ISO27001 and GDPR.
