## QUATERLY UPDATE APRIL 2020 UPDATE

### EXPERT CHATTER

#### ASK ANYTHING. LEARN EVERYTHING.

At the beginning of March, a set of vulnerabilities was identified and documented as being exploited by state-sponsored hacking groups. Chatter appeared to point towards China as the source of these attacks primarily.

There is much misinformation surrounding this subject; however, we should skim some critical information from the surface before disappearing down the rabbit hole.

This vulnerability only affects on-premise Exchange versions – 2013, 2016 and 2019 which can be patched

This also affects 2010 – which you should not be using, but if you are, there are greater issues at hand

Exchange Online/Office365 is not affected

The quickest and easiest remediation to this problem is to shut down access to your mail server on port 443 or mandate VPN usage to view your email.

There's no question that this vulnerability is problematic – and we still do not fully understand the extent of the impact.

Please monitor the NCSC guidance: <https://www.ncsc.gov.uk/news/advice-following-microsoft-vulnerabilities-exploitation> and make sure that you have your IOC database updated to include known scanners exploit IP addresses.

If it looks like you're affected by this, you should immediately run the test proxy logon script: <https://github.com/microsoft/CSS-Exchange/tree/main/Security>

Merlin Gillespie - Director of Cybanetix

### PARTNERS SPOTLIGHT

SentinelOne was founded by a group of international defence and intelligence experts who saw the need for a dramatic new approach to endpoint protection. Today, our growing global team remains dedicated to constant innovation.

SentinelOne's breakthrough platform is certified as an antivirus replacement, recognized by Gartner and NSS Labs for its disruption, and trusted by the world's most forward-thinking companies to protect their business.

We have had an excellent working relationship with Cybanetix over a number of years and they are one of our most trusted and technically capable partners in the UK.

#### 03 OUR NEW PARTNER LACEWORKS

Lacework is the data-driven security platform for the cloud. The Lacework Cloud Security Platform is the only security solution that can collect, analyze and accurately correlate data across an organization's AWS, Azure, GCP, and Kubernetes environments, and narrow it down to the handful of security events that matter.

[FIND OUT MORE](#)

As a charity and an event space, we face several different security challenges that your typical 9-5 organisation will not face. We needed someone that has the experience and the expertise in the charity sector to ensure we meet all of our security needs. Not only Cybanetix has the experience we needed, but also provided a faultless service that we are very happy with."
